

KAPSABET HIGH SCHOOL

MARKING SCHEME CHEMISTRY PAPER 3

1. Table 1.....5mks

Award a maximum total of 5 marks distributed as follows.

i. Complete table.....1mk

Conditions: either of the following:

- Complete Table with 3 Titrations done..... 1mk
- Incomplete Table with only 2 Titrations done..... ½mk
- Incomplete Table with only 1 Titration done.....0mk
- For no Titration done.....0mk

NOTE: where NO TITRATION done, penalize FULLY for ALL the marking points for Table 1.

Penalties:

before awarding a mark for complete Table; THE EXAMINER MUST ensure that none of the following mistakes is there in the Table- otherwise penalize ½mk for EACH MISTAKE but to a maximum penalty of ½mk(i.e. penalize ½mk ONCE even if there two or more mistakes):

- Wrong arithmetic/subtraction
- Inverted Table
- Burette reading(s) beyond 50.0cm³, except where explained.

ii. Use of Decimals (tied to the 1st and 2nd ROWS ONLY).....1mk

Conditions:

Either 1 or 2 decimal places used consistently.

If 2 decimal places are used then the 2nd decimal place MUST be either a “0”

iii. Accuracy (tied to CORRECT titre values ONLY).....1mk

Compare the candidate’s CORRECT Titre values with the school values, (i.e. Teacher’s Average Titre):

Conditions:

- If at least one titre value is within $\pm 0.10 \text{ cm}^3$ of SV, then awarded.....1mk
- If No titre value is within $\pm 0.10 \text{ cm}^3$ of the SV but at least one titre value is within $\pm 0.20 \text{ cm}^3$ of the SV, then award ½mark
- If NONE of the titre values is within $\pm 0.20 \text{ cm}^3$ of the SV, then award.....0mark

NOTE: If there is wrong arithmetic/ subtraction in the Table, compare the SV with the CORRECT worked out titre and award accordingly.

- iv. Principles of averaging.....1mk
 Values averaged MUST be shown and MUST be consistent within $\pm 0.20 \text{ cm}^3$ of each other.

Conditions.

- If 3 consistent values are averaged.....1mk
- If 3 titrations are done and only 2 possible averaged.....1mk
- If only 2 titrations are done, and are inconsistent and averaged.....1mk
- If only 2 Titrations are done, and are inconsistent and yet averaged.....0mk
- If 3 Titrations are done, ALL are possible and yet only 2 are averaged.....0mk
- If 3 inconsistent values are averaged.....0mk
- If only 1 Titration is done.....0mk

Penalties:

- Wrong arithmetic, i.e. arithmetic error outside ± 2 units in the 2nd decimal place (e.g. 24.67 given as 24.64), penalize ½mk
- If no WORKING is shown but “answer” given is correct, penalize ½mk.
- If value is rounded off to the 1st decimal place (e.g. $24.66 \approx 24.7$) or to a whole – number (e.g. $24.33 \approx 24$), penalize ½mk.
- If no working is shown but answer given is wrong, penalize FULLY, i.e. award 0mk

- v. Final accuracy (tied to the CORRECT average titre).....1mk
- Compare the candidate’s CORRECT average titre with the SV and award accordingly:
 - If within $\pm 0.10 \text{ cm}^3$ of the SV, award.....1mk
 - If Not within $\pm 0.10 \text{ cm}^3$ of the SV, but it is within $\pm 0.20 \text{ cm}^3$ of the SV, award½mk
 - If BEYOND $\pm 0.20 \text{ cm}^3$ of the SV, award.....0mk

TABLE 1

- Complete table.....1mk
- Use of decimals.....1mk
- Accuracy1mk
- Principles of averaging.....1mk

Calculations :

$$(i) \text{ Moles of NaOH in average titre} = \frac{0.05 \times 30.0}{1000} \sqrt{1/2mk}$$

$$= 0.0015 \text{ mol } \sqrt{1/2mk}$$

Note:

- Units may not be given but if given Must be correct otherwise penalize 1/2 mark for wrong units attached to correct answer.

(ii). Moles of HCl in 25 cm³ of solution FA4

NaOH : HCl

$$1 : 1 \quad \sqrt{1mk}$$

$$0.0015 \text{ mol} \quad 0.0015 \text{ mol } \sqrt{1mk}$$

$$(iii) = \frac{0.0015 \times 250}{25} \sqrt{1mk} = 0.015 \text{ mol } \sqrt{1mk}$$

Note:

- 0.0015 MUST be transferred and used INTACT otherwise penalize FULLY for any other figure used and award 0mk
- Accept answer given to at least 4 decimal places, otherwise penalize 1/2mk for rounding off to 3 decimal places or less.

(iv)

$$\bullet \text{ Moles of HCl in } 50 \text{ cm}^3 \text{ of FA2} = \frac{0.7 \times 50}{1000} \sqrt{1/2mk}$$

$$= 0.035 \sqrt{1/2mk}$$

(v) moles of HCl that reacted with magnesium = Ans in (v) – ans in (iv)

$$0.035 - 0.015 \sqrt{1/2mk} = 0.02 \sqrt{1/2mk}$$

(vi) Mg : HCl

$$1 : 2 \sqrt{1/2mk}$$

$$= \frac{0.02 \times 1}{2} \sqrt{1/2mk} = 0.01 \text{ mol } \sqrt{1mk}$$

2. Table 2.....4mks

Award a MAXIMUM TOTAL of 4mks distributed as follows:

i) Complete table.....2mks

Conditions/ penalties

- Award $\frac{1}{2}mk$ for EACH experiment completely done.
- Penalize $\frac{1}{2}mk$ for EACH solubility value either wrongly worked out or not work to a MAXIMUM penalty of 1mark.
- Penalize 1mark ONCE for unrealistic Temperature readings, for any Temperature reading $T \leq 25.0^{\circ}C$ and $T > 80.0^{\circ}C$.
- Penalize $\frac{1}{2}mk$ if ALL Temperature readings given in the Table are CONSTANT.

ii) Use of decimals(Tied to Temperature reading)..... $\frac{1}{2}mk$

Accept ONLY if all readings recorded consistently either as whole numbers or to one decimal place of .0 or .5, otherwise penalize FULLY.

iii) Accuracy $\frac{1}{2}mk$

Compare the candidate's first Temperature reading (i.e. Temperature reading when the volume of water added is $5.00cm^3$) with the school value, SV (i.e. the Teacher's temperature reading when the volume of water added is $5.00cm^3$). If within $\pm 2.0^{\circ}C$ of the SV, awarded 1mark, otherwise awarded 0mark.

iv) Trend1mk

Award mark for Temperature readings showing a CONTINUOUS DROP, otherwise penalize FULLY.

Hence the distribution of marks for table 2 is as follows.

TABLE 2

Complete table.....	2mks
Use of decimals.....	$\frac{1}{2}mk$
Accuracy	$\frac{1}{2}mk$
Trend	1mk
Sub-total	4mks

f) GRAPH.....3mks

Award MAXIMUM total of 3marks distributed as follows

A. Labeling of the axes..... $\frac{1}{2}mk$.

Award $\frac{1}{2}mk$ ONLY if BOTH axes are CURRENTLY labelled.

Penalties:

- Penalize FULLY for inversion of axes
- Penalize FULLY for wrong unit given, otherwise ignore if units are omitted.
- Penalize FULLY if only ONE axis is correctly labelled.

B. **Scale** $\frac{1}{2}mk$

Award $\frac{1}{2}mk$ for scale subject to the following conditions.

Conditions:

- Area covered by the PLOTS must be at least half the grid on EACH of the axis
- Scale intervals MUST be consistent on EACH axis.
- Scale chosen must be able to accommodate ALL plots/ points-Examiner MUST check the range of the readings on EACH axis.

Note: penalize FULLY if any of the above three conclusions is NOT met.

C. **Plotting** 1mk

Award maximum of 1 mark for plotting.

Conditions:

- if 6 or 5 points are correctly plotted award 1mk
- if only 4 or 3 points are correctly plotted award $\frac{1}{2}mk$
- If less than 3 points are correctly plotted award 0 mark.

D. **Curve** 1mk

Award 1mark for a smooth rising curve joining at least three correctly plotted points.

Note: Reject curve obtained by plotting 2 or more wrongly calculated solubility values from table 2.

Hence the distribution of marks for the graph is as follows.

Label of axes.....	$\frac{1}{2}mk$
Scale.....	$\frac{1}{2}mk$
Plotting.....	1mk
Curve	1mk
<hr/>	
Sub-total	3mks
<hr/>	

(g)

(I) Correct reading from the graph. $\sqrt{1mk}$

(II) Correct reading from the graph. $\sqrt{1mk}$

(h) 100g – ans in (g)(ii) $\sqrt{1mk}$

Final ans $\sqrt{1mk}$

3. a

(i)

OBSERVATION(S)	INFERENCE(S)
<ul style="list-style-type: none">White ppt $\sqrt{1/2mk}$ formed which then dissolves $\sqrt{1/2mk}$ in excess alkali forming a colourless solution.	Al^{2+} , Pb^{2+} , Zn^{2+} , present $\sqrt{1mk}$ <ul style="list-style-type: none">All 3 ions givenOnly two ions given. $1/2mk$Only one ion given. 0mk

(ii)

OBSERVATION(S)	INFERENCE(S)
<ul style="list-style-type: none">White ppt $\sqrt{1/2mk}$ formed which is insoluble $\sqrt{1/2mk}$ in excess aqueous ammonia	Al^{2+} $\sqrt{1/2mk}$, Pb^{2+} , $\sqrt{1/2mk}$ present <ul style="list-style-type: none">Penalize $1/2$ mark for each contradictory ion.
