Read the passage below and answer the questions 11 to 17.

Gardening is a good and enjoyable pastime. A garden is a piece of ground adjoining a house where various trees, flowers, fruits, vegetables and so on are grounded. Each garden is surrounded by a fence. Domestic animals as well as pests are not meant to interfere with the garden. Usually, fences are made of wood or bamboo. The green fence is raised around the garden sometimes. The garden is split into various parts to accommodate flowers, crops, fruit trees and vegetables. There are many types of gardens, however, fruit and vegetable gardens are more popular with both urban and rural dwellers. Some of institutions of learning also have their own gardens mostly to help learners with agricultural projects.

Skilled gardeners grow different kinds of vegetables during different seasons. There are vegetables that give good yields during rainy seasons. On the other hand, some vegetables grow a lot better in dry seasons. Gardeners require such information to get the best out of their gardens. Different species of flowers require certain climatic conditions to grow well. Fruit trees are meant to last long hence can be grown anytime although they definitely grow faster when the ground is wet. As for areas that do not receive much rainfall throughout the year, it is advisable to practise irrigation. Drought should not be an excuse of failing to practise gardening. In fact, one may not even need a big space to start a garden. It is not uncommon to see gardeners piling soil in sacks, pots or boxes and using them to grow vegetables. This practice is more common in urban areas.

It is important to keep the garden neat and tidy by attending to it several times a week. Pick up any unwanted litter and dump it in the bin. Plastics and paper bags should not be left in the garden. Dry leaves and grass do not have to be burnt. They should be left to rot and improve the fertility of soil. The use of manure can also be of great significance to the garden. Do not be tempted to use commercial fertilizers. They are harmful to the soil and pollute the environment. Weeding and mulching are also highly recommended for the well-being of the garden. Keep the garden as beautiful as possible. Let it be attractive to encourage other people to start the practice.
