African elephants are the largest land animals on Earth. They are slightly bigger than their Asian cousin. They can easily be identified by their larger ears that look somewhat like the continent of Africa. Asian elephants have smaller, rounded ears.

However, in Africa, Scientists have discovered two types of elephants. The savanna elephants and the forest elephants. The former are much bigger than the latter.

During the dry season, Elephants can use their tusks to dig up dry river beds and create watering holes many different animals can drink from.
